This technical informations comes from the manufacturer and was transcribed by Texel. Properties are minimum average roll value except when specified otherwise.

1- Nominal dimensions

2- Load transfer capability determined in accordance with ASTM D6637 and ASTM D7737 and expressed as a percentage of ultimate tensile strength.

3- Radial stiffness is determined from tensile stiffness measured in any in-plane axis from testing in accordance with ASTM D6637.

4- The ratio between the minimum and maximum observed values of radial stifness at 0.5% strain, measured on rib and midway between rib directions.

5- Resistance to loss of load capacity or structural integrity when subjected to chemically aggressive environments in accordance with EPA 9090 immersion testing.

6- Resistance to loss of load capacity or structural integrity when subjected to 500 hours of ultraviolet light and aggressive weathering in accordance with ASTM D4355.
